PHYTOBIOENERGY: FRA.SE METHOD.

What is considered to be of fundamental importance in Phytotherapy is the concept of Phytocomplex. Test results show that the single active principles have a lesser effect than those of the full range of substances found in the plant.

PHYTOCOMPLEX supplies those materials, depleted through energy consumption, which keep the body metabolism active.

Lab test results, supplied by traditional phytotherapy in which fresh or dried plants are used, remain effective even when it comes to hydroalcoholic extracts as long as this does not change the phytocomplex of the plant.

Studies on these test results outlined the organotropism of the various plants along with those of their E.I. counterparts. Further considerations have correlated the organotropism of the E.I. to around about the same level as acupuncture so, in the same range as the various ORBIS contained in the FRA.SE chart. (see follow up).

The FRA.SE.chart is made up of 12 circular fields or ORBIS placed around a circumference; in each of these fields the corresponding meridian acupuncture can be found..

The FRA.SE.chart, once the altered meridian has been targeted, (or SOURCE ORBIS) helps to choose the most suitable E.I. so as to balance both said meridian and those energetically connected. Each ORBIS is flanked by an E.I.

The FRA.SE. Chart is a GEOMETRICAL-MATHMATICAL ALGORITHM which, if applied correctly, (see fundamental practical rules) leads to a natural respect of the laws relating to energy (table A) without necessarily having any specific knowledge of acupuncture.

Defining SOURCE ORBIS (most altered meridian) can be done in three different ways; LINEAR SYMTOMATOLOGY CODE (table B) BIOELECTRONIC DIAGNOSIS or KINESOLOGY.

BASIC PRACTICAL RULES

Once SOURCE ORBIS (SO-corresponding to the most altered meridian) has been established, another three ORBIS must be selected (corresponding to those meridians which have been altered due to SO imbalance). These are indicated in a set position on the FRA.SE. chart as opposed to SO and are as follows:

ORBIS diametrically opposed to SO.

ORBIS preceding SO

ORBIS following SO.

The choice of these four ORBIS (and therefore the EI corresponding to these) will lead to the balancing of A,B,C, and D. The doses of E.I. to be used can be seen in brackets..

A = BALANCING MERIDIAN POLARITY (10 drops.)

Energy balance yin (negative-cold) or yang (positive-hot) of the selected meridian such as SOURCE ORBIS.

B= ADDITIONAL BALANCING (10 drops.)

Balances two meridians diametrically opposed on the chart in compliance with the LAWS of OPPOSITION and INTERACTION BETWEEN YIN and YANG.

C= LOCULUS BALANCING (5 drops.)

Balances two meridians of opposing characteristics but which share the same locus according to the LAWS of EMBRYONIC AFFINITY.

D= FULL-BODIED BALANCING. (5 drops.)

Balances B and A according to the LAWS of ENERGETIC LEVEL

CHOOSING E.I. TO ASSOCIATE WITH EACH ORBIS.

Once the ORBIS in the FRA.SE. chart has been identified, the most suitable E.I. for each is chosen by applying the GENERAL SYMPTOMATOLOGICAL CODE.

TO SUM UP, PROCEED AS FOLLOWS:

- Identify SOURCE ORBIS and consequently define the other 3 ORBIS connected to these.
- Match E.I. to the ORBIS.
- The selected E.I. are given in the most appropriate doses so as to reach the different balances.
A= BALANCING MERIDIAN POLARITY (10 drops.)
B= ADDITIONAL BALANCING (10 drops.)
C= LOCULUS BALANCING (5 drops.)
D= FULL-BODIED BALANCING. (5 drops.)

The drops are to be taken twice a day (morning and evening) diluted in just less than half a small glass of water.

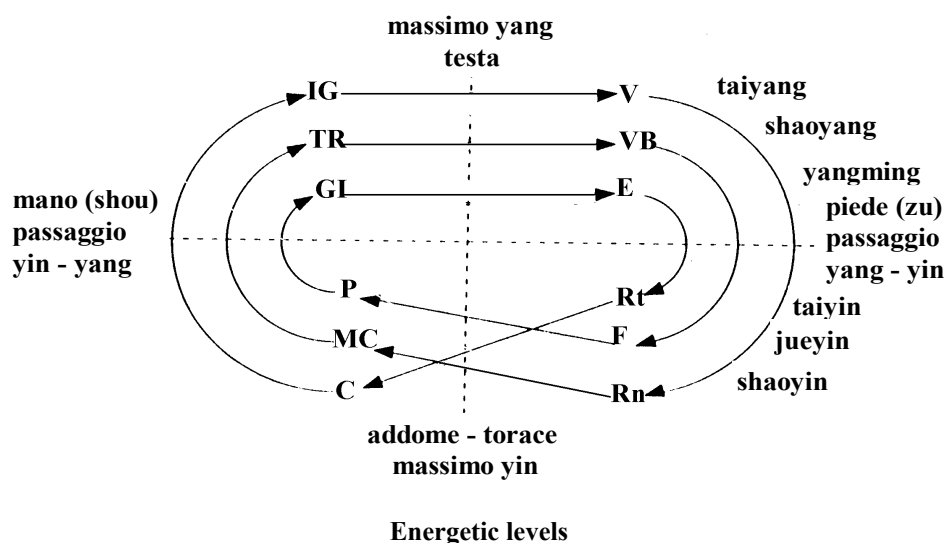

TABLE A

PHYTOBIOENERGETIC FRA.SE: THE VALVES

A recent evolution in Phytobioenergetics FRA.SE. uses particular valves of crushed plants; the same used to make the 18 TM subject to this report. These valves can be used in Phytobioenergetic FRA.SE. in the same way as TM as long as the PHYTOCOMPLEX of the plant is preserved and, furthermore, the same quality control described for TM can be applied.

The valves contain 20 mg. of crushed plant and around 10 mg. of fructose.

Fructose, electromagnetically treated, (ecchymerization) stabilizes the biophotonic characteristics of the crushed plant.

The box, with a mirror effect inside, protects the bottle (containing the valves or the TM) from external electromagnetic pollution thus protecting the ecchymerization.

For a perfect equivalence, following the the lab test results with both preparations, the valves must be taken as follows:

- **First dose** (morning)

1 valve corresponding to SOURCE ORBIS + 1 valve corresponding to ORBIS SUPPLEMENTARY BALANCING.

- **Second dose** (evening)

1 valve corresponding to the LOCULUS BALANCING +1 valve corresponding to the FULL-BODIED BALANCING.

In the following summary, the TM and VALVE codes are outlined.

CORRISPONDENZE TRA CODICI TM - OPERCOLI E NOMI BOTANICI

CODICE TM	CODICE OPERCOLI	NOME BOTANICO
AGM	AGMO	Abuta Grandifolia (Mart.) Sandwith
ACV	ACVO	Adiantum Capillus Veneris L.
ACW	ACWO	Alchornea Castaneifolia (Willd.) Juss.
ABK	ABKO	Aristiquietia Ballii Kung. Et Roxb.
BS	BSO	Buddleja Sp.
CPK	CPKO	Cheilanthes Pruinata Kaulf
CDM	CDMO	Croton Draconoides M. Arg.
HAM	HAMO	Heliotropium Angiospermum Murray
LMW	LMWO	Lepidium Meyenii Walp.
MSB	MSBO	Minthostachys Setosa (Briq.) Epl.
MVB	MVBO	Muehlenbeckia Volcanica (Benth.) Endl.
OMR	OMRO	Oenothera Multicaulis R. Et P.
PNL	PNLO	Phyllanthus Niruri L.
SML	SMLO	Schinus Molle L.
SPL	SPLO	Schkuhria Pinnata (Lam.) Kuntze
SAK	SAKO	Stachys Arvenis Kunth.
TIR	TIRO	Tessaria Integrifolia R. Et. P.
UTW	UTWO	Uncaria Tomentosa (Willd.) Dc
